AUTOZYME™ ENA Anti-ScI-70 antibodies well pack is a sandwich immunoassay for the detection of antibodies to ScI-70 antigen in human serum or plasma.

### ● **Summary and explanation of test**

The AUTOZYME™ ENA method employs a unique antigen-coated microwell technology, which is ideal for the batch-screening of large numbers of samples for a range of auto-antibodies. The method utilises a non-competitive sandwich enzyme immunoassay system and is identical for all six antigens:

Ro (SS-A), La (SS-B), Sm, Sm/RNP, Jo-1 and ScI-70.

Anti-ScI-70 antibodies appear as a clinical indication in 25% of patients with scleroderma.

This product must be used in conjunction with the AUTOZYME™ ENA bulk pack (Catalogue No: Z1000).
